The Best Publication of It's Type Ever !!!By Raymond McNeilI was borrowing this book from my local public library when I started my new home model train project. I wanted to get this project as good as possible for my young son and two grandchildren. Most model train people are aware that a painstaking project for a large layout can take years and I didn't want to make any major mistakes or unwanted miscues if I applied those fundamentals correctly. This book was re-borrowed out of the library about six times with the library people not restricting my length of time or fining me for any few days due to late returns. It finally hit me! Would I lease a car that I wanted permanently to keep or just plain buy it outright. Real no-brain er! I'm so happy to have added this book to my extensive library of books, films, memorabilia and periodicals as my quest to produce a great train layout for my family in our home. This book is a gem and once again I wish to extend my thanks to the provider

(Goodwill Stores) and to help me to attain our family's dream layout. I'm now still working on this project with complete confidence derived from referring to this book; and, of course, the help of my wife and family!!!0 of 0 people found the following review helpful. 101+ Projects for starter railroadersBy CRAIG A. BUHRFound this one in library and after reading it, I knew that I was going to locate on and purchase myself. Have found most of the chapters with great ideas that I just need time to fully benefit from.0 of 0 people found the following review helpful. Useful tipsBy Carlos VSeveral useful tips in most common scales. The book is well organized by topics and user's skills. A good addition to your bookshelf as a book to complement your hobby activities

A treasury of weekend projects for all model railroad enthusiasts, spanning everything from bench framing to wiring, assembling buildings, creating realistic ground covers, detailing locomotives, and running the railroad. Each project includes a handy table explaining the time (one to eight hours), tools, materials, money, skill level, and space required for successful completion. Studio photographs complement the text, and although the focus is on information specific to HO scale, each project includes a list of scales to which it is applicable.
