I found this book online and decided to read up on this hobby. I found the book very insightful and discovered I shouldn't be so afraid around the hives. After reading this, I've even went

with my neighbor when he was transferring the honey from the hive. and he was impressed I knew so much about beekeeping. Not sure if I will ever raise bee's myself, but this books makes me appreciate honey more because now I understand the process. I would defiantly recommend this book.0 of 0 people found the following review helpful. Bzzzz!By BradenBeekeeping has always been an interest of mine. I wasnt sure if I wanted to dive right into it, which is why I picked up this book. It has provided me with a great deal of information on the topic, and I now feel a lot more knowledgeable about the subject. I am still not sure if I want to get involved with beekeeping just yet, but I do feel a lot more informed, so if I do start, I will know where to begin.

The popularity of beekeeping has grown exponentially over the last couple of years, as people have gained an increased desire to become more self sufficient and use their gardens for more than just recreation. Beekeeping has allowed people like you and me to harvest honey that not only stems from our own backyard, but tastes ten times better than the one you buy in the store. Beekeeping has appealed to people who simply want the best in terms of food and ingredients (or just wants to make some money on the side). The sole purpose of this book is to offer you all the information that you need in order to start on your beekeeping journey. Not only will this book cover everything from how to harvest honey to hiving a swarm of bees, but it will also take you step-by-step, showing you how to set yourself up for beekeeping success. Here are some of the topics that are covered in this book: The sustainability factor of beekeepingHow to place the hiveHow to hive a stockHow to hive a swarmBeekeeping throughout the yearHow to extract honeyCleanlinessmuch, much, more This is the only book on beekeeping you will ever need!
