Ren Gourley : Building an HO steam locomotive: In brass and styrene before purchasing it in order to gage whether or not it would be worth my time, and all praised Building an HO steam locomotive: In brass and styrene:

In this book, Ren shows you the step-by-step process he used to build an HO steam locomotive from brass and styrene. As Ren journaled this steam loco construction project online, many asked if he could make his writings and photographs available in published form. The result is this book, which tracks his methods and ideas, with step-by-step photos of the entire process.

About the AuthorRen Gourley has been building model trains since he received his first train set at the age of five. In 1994, while attending the NMRA National Convention in Portland Oregon, he founded the Proto:87 Special Interest

Group, which he spearheaded for seven years. Although he grew up in Ottawa, Ontario, near the old Canada Atlantic line, he now lives with his wife and two children in North Vancouver, British Columbia. Professionally, he manages a software development team.
